

SPECIFICATIONS
CDSA500R2W
OUTLINES DIMENSIONS

- Notes:
1. All Dimensions are in millimeters (inches).
 2. Tolerance is $\pm 0.25\text{mm}$ (0.01") unless otherwise noted.
 3. Specifications are subject to change without notice.

| Part Number | Chip Material | Color of Emission | Lens Type | Description |
|-------------|---------------|-------------------|---------------|--------------|
| CDSA500R2W | InGaAlP | Red | White Segment | Common Anode |

ABSOLUTE MAXIMUM RATINGS
(TA=25°C)

| Parameter | Symbol | Max Rating | Unit |
|---|------------------|------------|------|
| Power Dissipation | P _D | 840 | mW |
| Pulse Current Forward Current | I _{FP} | 240 | mA |
| Continuous Forward Current | I _F | 75 | mA |
| Reverse Voltage | V _R | 20 | V |
| Operating Temperature Range | T _{OPR} | -25~+85 | °C |
| Storage Temperature Range | T _{STG} | -25~+85 | °C |
| I _{FP} = Pulse Width ≤ 10 ms, Duty Ratio ≤ 1/10. Soldering Condition: 260 °C/ 5sec | | | |

OPTICAL-ELECTRICAL CHARACTERISTICS
(TA=25°C)

| Parameter | Symbol | Test Condition | Value | | | Unit |
|-----------------------------|----------------|-----------------------|-------|-----|-----|------|
| | | | Min | Typ | Max | |
| Luminous Intensity | I _v | I _F = 30mA | - | 450 | - | mcd |
| Forward Voltage per Segment | V _F | I _F = 60mA | - | 8 | 9.6 | V |
| Reverse Current per Segment | I _R | V _R = 20V | - | - | 10 | μA |
| Dominant Wavelength | λ _D | I _F = 60mA | - | 625 | - | nm |
| Spectral Line half-width | Δλ | I _F = 60mA | - | 20 | - | nm |

SOLDERING CONDITIONS – LAMP TYPE LED

* Solder the LED no closer than 3mm from the base of the epoxy bulb. Soldering beyond the base of the tie bar is recommended.

* Recommended soldering conditions

| Dip Soldering | |
|-------------------------|--|
| Pre-Heat | 100 °C Max |
| Pre-Heat Time | 60 Second Max |
| Solder Bath Temperature | 260 °C Max |
| Dipping Time | 5 Second Max |
| Dipping Position | No lower than 3mm from the base of the epoxy |

| Hand Soldering | | |
|----------------|---|---|
| | 3mm Series | Others |
| Temperature | 300 °C Max | 350 °C Max |
| Soldering Time | 3 Second Max | 3 Second Max |
| Position | No closer than 3mm from the base of the epoxy | No closer than 3mm from the base of the epoxy |

* Do not apply any stress to the lead. Particularly when heated.

* The LED must not be repositioned after soldering.

* After soldering the LEDs, the epoxy bulb should be protected from mechanical shock or vibration until the LEDs return to room temperature.

* Direct soldering onto a PC board should be avoided. Mechanical stress to the resin may be caused by the PC board warping or from the clinching and cutting of the leadframes. When it is absolutely necessary, the LEDs may be mounted in this fashion, but, the user will assume responsibility for any problems. Direct soldering should only be done after testing has confirmed that no damage, such as wire bond failure or resin deterioration, will occur. LEDs should not be soldered directly to double sided PC boards because the heat will deteriorate the epoxy resin.

* When it is necessary to clamp the LEDs to prevent soldering failure, it is important to minimize the mechanical stress on the LEDs.

* Cut the LED leadframes at room temperature. Cutting the leadframes at high temperature may cause LED failure.
